# Zero Client DVD Player Bundle Quick Start Guide

About the DVD Player Bundle

The Zero Client DVD Player Bundle includes a DVD player (reader/writer) and a ClearCube zero client. Use the player to read and write DVDs and CDs when connected to a remote blade or VM. Your zero client might look different than the one shown below.

Supplying Power

The DVD player is powered by a zero client USB port. As shown in the picture below, use the included USB-to-mini-USB cable to connect the DVD player to the zero client. Your zero client might look different than the one shown below.

Opening and Closing

To open: Press the Open button (shown above) on the front of DVD tray.

> **NOTE:** To open the DVD player, the zero client must establish a PCoIP session with a remote host (such as a blade or VM). When a PCoIP session is established, the zero client power button is green, and the PCoIP session indicator is green. After a session is established with a remote host, the zero client USB ports enumerate and the DVD player can open. See the included zero client *Quick Start Guide* for information about establishing a PCoIP session.
>
> The DVD tray does not open when the zero client is in standby mode (indicated by an orange power button).

To close: Push the tray inward until it locks in place.

Manual eject: If the DVD tray does not open after pressing the button, gently insert a thin object (such as a straightened paper clip) into the manual eject opening. This operation releases the tray.
