

Providing clear, configurable, blended solutions.

ClearCube and Belkin combine forces.

Government agencies, military, and energy sectors generate large amounts of data from multiple sensors and interconnected devices. This leaves sensitive information open to cyberattacks, creating a need for high-performing, scalable, cybersecure devices.

ClearCube Technology and Belkin International are partnering to offer specialized cybersecurity products for government, military, and energy end users. ClearCube's ClientCube lineup of devices integrate Belkin's Secure KVM/KM solutions, designed and built to safeguard critical data and computer systems. Offerings stress superior security, topnotch quality, and convenient portability – customized for environments where cybersecurity is critical.

The First All-In-One Multiple Security Level PCoIP Solution

Following in the tradition of purpose-built solutions for Federal and DoD customers, the ClientCube by ClearCube Technology is the first endpoint that consolidates up to eight networks (any mix of tactical, secret, confidential, unclassified) into one device at the desktop, while maintaining physical network separation to centralized computing resources in the datacenter. VMware Horizon View and PCoIP Blade PC workstations can now be isolated and secured in the datacenter without compromising the user experience or network security at the desktop.

Belkin Modular and Universal Secure KVMs (SKVMs) and KMs pair with ClearCube Technology's lineup of products. Together, these fully integrated solutions optimized for multiple-security domain environments offer numerous features and benefits:

- ClientCube products integrate Belkin Modular SKVM, KM, and Universal SKVM
- A ClientCube provides line of sight isolation from the data center to the desktop
- A ClientCube makes computer footprints smaller, consolidating them into a compact chassis that frees up desk space and reduces clutter
- Desktops are cleared of tangled cables and cords, reducing setup time and weight

ClearCube Technology

Secure endpoint solutions for a comprehensive central and virtual desktop experience.

ClearCube Technology is a U.S.-based OEM specializing in creating innovative secure endpoint products, centralized computing, and desktop virtualization solutions. Company offerings address issues pertaining to security, cost savings, and solving IT and end user problems. Since 1997, federal and enterprise agencies have implemented ClearCube Secure endpoint devices ranging from zero and thin clients to blade PCs to VDI compute/storage solutions for centralization and virtualization initiatives.

Belkin International, Inc.

Protecting critical data and computer networks.

For over 16 years, Belkin has worked with Information Assurance and Technology Specialists, Technology Directors, and Strategic Application Professionals to operate successfully within federal work environments where cybersecurity is a critical consideration.

Adopting the approach that risk is not an option, our subject matter experts work directly with end users, clients, and experts to discover pain points, explore use cases, and provide specialized solutions. Belkin provides industry-leading Secure KVM/KM solutions, offering NIAP-certified and TAA-compliant products with features and capabilities to streamline the desktop and ensure workforces stay protected and productive.

ClientCube Net-4 SFF.

The latest model in a lineup of the first and only all-in-one multiple security level PCoIP solutions.

This compact console is purpose-built to house Belkin's smallest 4-port KVM/KM switch. The Net-4 SFF (Small Form Factor) creates a terrific, unique user experience while taking up a small footprint on a desktop to free up valuable workspace. Its small chassis can also be mounted under the desk. This unit can function as a traditional KVM or as a KM so that all displays remain live. When built with a KM, switching networks happens automatically and seamlessly as the user moves the mouse cursor from one screen to another.

Key features and benefits:

- The ClientCube Net-4 SFF is fully compatible with the Belkin SKVM Remote Control with Integrated Keyboard*
- Houses up to four endpoints with fiber connections and optional CAC readers
- Delivers a full-quality computing experience to VMware Horizon® desktops and PCoIP® Blade PC workstations
- Offers a fully integrated solution optimized for multiple-security domain environments

- Enables CAC and Smart Card switching between 4 zero clients on 4 different networks
- Consolidates the power cables and the cables from the endpoint devices to the KVM/KM
- Features an efficient design with one-foot cables and a consolidated power cord to save 40 feet of cabling, cabling weight, and cabling nuisance
- Includes optional "Fly-Away Kit" version (with rugged shipping case and optional keyboard, mouse, monitor) available for portability
- End users benefit from an unparalleled user experience and reclaimed workspace; IT benefits from the built-in security protections and features, as well as from a greatly simplified setup and take-down process

* Please consult with your Belkin sales representative to confirm if your Modular SKVM/KM model is compatible.

Belkin Modular 4-port SKVM/KM.

Designed for use on government and military networks.

Belkin's 4-Port Modular Secure KVM/KM Switches w/Remote pack the latest in Common Criteria and NIAP Protection Profile for Peripheral Switching Devices version 4.0 design requirements in the smallest form factor available. Compatible with legacy and new systems, the Modular series of secure KVMs includes a remote control and innovative mount options to allow administrators to craft operator stations to meet security requirements while decluttering the desk.

Key features and benefits:

- Designed for NIAP PP PSD 4.0 compliance - Video support for up to 4K (3840x2160), @30Hz refresh
- Optional DP, mDP, DPMST, HDMI, DVI, VGA, and USB-C cables for hosts. All connectors (except USB-C cables) for console
- Modular form factor for maximizing desk space
- Supports up to 4 host computers and two displays for the user
- Includes remote-control unit
- Secure packaging: Tamper-evident packaging ensures product is not tampered with during transport
